ARAZVERA TECHNOLOGIES

# LEVEL 5

## ENTERPRISE AGENT

## SECURITY & GOVERNANCE

Independent source engineering for safer AI-agent tool execution, MCP boundaries, identity delegation, cost controls and audit evidence.

**SOURCE-ONLY LABS | NOT A CERTIFIED PRODUCTION PLATFORM**

PUBLIC BUYER BRIEF - NOVEMBER 10, 2026

# Enterprise control areas

Five independently relevant governance concerns are represented by tested private labs. The work is intentionally scoped and excludes real customer credentials or production rollout.

## 01

### MCP & TOOL TRUST

Pinned tool manifests, local HTTP tool-call interception, scope checks and deny-first execution rules.

## 02

### AGENT IDENTITY

HMAC delegation, expiry, revocation and versioned policy drift checks on synthetic principals.

## 03

### AGENT FINOPS

Atomic local budget reservations, idempotent settlement records and over-budget holds.

## 04

### AUDIT & EVALUATION

Local HMAC checkpoints, hash-chain verification and deterministic safety evaluation gates.

## 05

### DATA & RUNTIME BOUNDARIES

Limited sensitive-field masking and local trace thresholds for unapproved tool calls, abnormal cost, error bursts and latency. These are narrow offline controls, not enterprise DLP or a production SOC.

**All current verification is LOCAL LAB EVIDENCE. The source is private, and its commercial and production-readiness reviews remain pending.**

# Private source families

The following names describe implemented research/lab source, not thirteen deployed enterprise applications. Two products are transparent compositions that reuse other modules.

| SKU | PRODUCT FAMILY | SCOPE OF TESTED LAB |
|---|---|---|
| 001 | **Governance foundation** | Local policy, approval and audit gateway |
| 002 | **MCP manifest trust** | Pinned static source/permission checks |
| 003 | **Agent FinOps v0.1.1** | SQLite budget reservations and reconciliation |
| 004 | **Evidence vault** | HMAC chain and separately held checkpoint |
| 005 | **Evaluation gate** | Deterministic synthetic release safeguards |
| 006 | **Data boundary** | Narrow secret-pattern redaction tests |
| 007 | **Premium control bundle** | COMPOSITION of 002-006 |
| 008 | **Agent delegation** | Scoped HMAC tickets, TTL and revocation |
| 009 | **Policy drift** | Scope/risk-change review and HOLD |
| 010 | **MCP schema inspection** | Offline tool-descriptor drift checks |
| 011 | **Trace anomaly guard** | Synthetic error/cost/latency limits |
| 012 | **Trust operations bundle** | COMPOSITION of 008-011 |
| 013 | **MCP HTTP v0.1.1** | Real localhost tools/call subset; not full SDK |

**13 SKUs / 11 independently rooted components / 2 compositions**

# Evidence & buyer diligence

Source-focused scope can be evaluated in writing, but no current package has completed buyer-specific enterprise acceptance or independent commercial IP review.

| TEST SUITE | PASS |
|---|---|
| Original governance foundation | 42 |
| FinOps / audit / evaluation / data controls | 49 |
| Delegation / drift / schema / trace | 45 |
| Local MCP HTTP tool-call subset | 22 |
| **TOTAL DISTINCT LOCAL ACCEPTANCE TESTS** | **158** |

## NOT YET ENTERPRISE-ACCEPTED

Outstanding: real OIDC/SSO and authenticated reviewer identity; full MCP SDK interoperability and upstream network controls; external evidence attestation; production telemetry, reliability and penetration testing; legal ownership, dependency and cross-border transfer review.

Potential commercial models: non-exclusive internal-use source license, OEM/white-label agreement, exclusive IP assignment or scoped engineering services. Each requires separate written terms and legal review. No price is validated.
