LEVEL 7 ENGINEERING PROFILE

ARAZVERA TECHNOLOGIES | Python technical product engineering

PRIVATE SOURCE / VERIFIED LAB TESTS / WRITTEN-ONLY CONTRACTING

ENGINEERING SPECIALIZATION

Independent, reproducible Python engineering components for supplier evidence validation, AI tool authorization decisions and recovery test evidence. Products are limited technical labs, not completed enterprise SaaS deployments. All three products are independent of AERON and have no connection to its servers or APIs.

ACTIVE TECHNICAL PORTFOLIO

- Supplier Evidence v0.2 - tenant-scoped SQLite import and discrepancy checks, human review, idempotent submissions, server-keyed localhost FastAPI. No real ERP/DPP connection.
- AI Agent Control v0.1 - durable deny-by-default tool policy, quota, pending approval and audit. No live AI model/MCP tool execution.
- Recovery Evidence v0.1 - native SQLite backup, SHA256 integrity manifest, dry-run and isolated recovery. Single-host lab only.

VERIFIABLE EVIDENCE

- 43 tests passed on Windows Python 3.12. Four GitHub Actions jobs passed on Windows/Ubuntu Python 3.11/3.12.
- Standalone extracted-release testing: supplier 20, agent 10, recovery 9 tests.
- Real localhost supplier API exercise: unauthorized 401, authorized import 201, tenant isolation.

POSSIBLE SCOPED CLIENT WORK

Supplier-data QA adaptors, API regression suites, explicit tool-policy decision integration, and documented SQLite restore checks. Production hardening, customer identity/API integration, ongoing support and any SLA are separately specified and verified.

LEGAL / WORKING MODEL

Contractor genuinely based in Iran. Work requires permitted cross-border contract, export/sanctions, source rights and payment assessment. Client owns and pays for deployed infrastructure and required APIs. Technical requirements, clarifications, evidence and acceptance are handled exclusively through asynchronous written English; no audio/video interview or call.
