ARAZVERA TECHNOLOGIES

Engineering Services & Product Catalog

Public buyer edition | 11 November 2026

Independent Python engineering products and client-adaptable technical labs

ARAZVERA delivers scoped Python/FastAPI engineering, API integration, data integrity, controlled automation and evidence-driven verification. Levels 1-7 are *internal labels*, not formal certifications. The projects described are independent of AERON and Iran-specific projects. No such systems have been connected.

Choose a project scope

Level	Service / product focus	Evidence and limits
1	Small Python repairs, utilities, API/automation starter kits	Internal reusable modules; security and target-environment acceptance pending
2	Backend APIs, webhooks, transactions, tenant data and Docker/CI	Nine public synthetic cases; 75 public tests, separate private lab baseline
3	RLS/tenant isolation, JWT/JWKS, recovery, event delivery, migration	Private specialist repositories with CI; real buyer systems untested
4	Canary release/HOLD/rollback, incident data, PostgreSQL restore	129 local lab tests; synthetic container exercises, not production DR
5	Agent-tool controls, policy/budget checks, HMAC delegation, MCP gateway	13 registered private SKU entries; 158 distinct local tests; no certified enterprise gateway
6	Supplier evidence QA, CRA incident rehearsal, DORA records triage	Three pilot families, latest report 146 local tests; no regulatory filing/certification
7	Supplier contracts, restricted agent execution, multi-SQLite recovery	Three private product families; 82 local tests and 71 extracted package retests

What buyer receives in a scoped engagement

- Written discovery and detailed acceptance criteria.
- Synthetic-first technical demonstration and limitations register.
- Client-specific adapter and documented integration assumptions.
- Regression/security tests in an authorized staging environment.
- Agreed deployment/rollback documentation and handover.

What buyer must provide

Authorized APIs, target environment and customer-owned VPS/hosting, account permissions, third-party licences, access to approved sample data, a responsible technical reviewer and agreed acceptance criteria. True production readiness may require significant further IAM, safety, operational and security engineering.

Key disclosures

This catalog is **not evidence of customer production deployments, formal security certification, compliance approval, sales or signed customer acceptance**. Private source, credentials and real customer information are not

published. Contractor resides in Iran; contracting, IP/licensing, export/sanctions, data and payment eligibility must be reviewed before transfer. Technical collaboration is asynchronous written English only.
